

Remarks

The Examiner has required restriction/election between invention I of claims 12-18 drawn to a method for calibrating a camera-laser unit and invention II of claims 19-22 drawn to a calibration object. In response thereto, the applicant elects invention I of claims 12-18. This election is made **with traverse**.

The traverse is based on the instant amendment in which former independent claim 19 of invention II has been cancelled and replaced by new device claim 23. Claim 23 is identical in scope to method claim 12 and only replaces each and every method step with means for performing that step. Reconsideration, withdrawal of the restriction requirement and examination of all claims is therefore requested.

No new matter has been added in this amendment.
